

Computer and internet art

Since the mid-1960s, many artists have experimented with new technologies such as video, computers and the internet, allowing some to incorporate elements of mass communication and computer-generated imagery in their work. The first exhibitions of computer art were held in 1965 in Stuttgart, New York and Las Vegas, but one of the most influential was hosted by London's Institute of Contemporary Arts (ICA) in 1968: 'Cybernetic Serendipity' showcased work by pioneers of digital media such as Nam June Paik (1932–2006), Frieder Nake (b.1938), Georg Nees (b.1926), A. Michael Noll (b.1939), John Whitney (1917–95) and Charles Csuri (b.1922). The following year, the Computer Arts Society was established in London: computer and video art has since become widespread. Since the mid-1990s, the World Wide Web, invented by British computer scientist Tim Berners-Lee (b.1955) has itself become a forum for art. Rather than confining art to galleries and museums, internet art is interactive and inter-connective, dissolving boundaries between artists and viewers.
